CCC-Certificate

A CCC-Certificate is only necessary for electrical devices with a power supply of more than 36 volt.

Therefore we do have a CCC-Certificate for the following items:

BES with a power supply of more than 36 volt e.g. AC/DC 2-wire.
BNS, BSW and BSE in general.

A CCC-Certificate is not possible for electrical devices with a power supply of less than 36 volt.

For this reason there is no CCC certificate for the following items:

BCS with a power supply of less than 36 volt e.g. 10...30 Volt DC
BES with a power supply of less than 36 volt e.g. DC 3-/4-wire
BOS with a power supply of less than 36 volt e.g. 10...30 Volt DC
BMF with a power supply of less than 36 volt e.g. 10...30 Volt DC
BTL, BIS, BCC and BAW in general.
